

HYDRAULIC COMPRESSION HEAD

Model No. **EP-100W** 100Ton output compression head

EP-100W Compression Head

EP-200 & 100W Compression Heads with HPE-3

SPECIFICATIONS

Ram stroke: 22mm
between dies.
Oil volume required:
314cc
Force at die face:
100 metric tons at normal
working pressure.

SIZE

200mm Dia. x 350 (H)
mm

WEIGHT

32.0 kg

ACCESSORIES

REMARKS

Dies are sold separately.

Light Weight

Removable die cap for easy
connector positioning.

Simple compact design for
easy maintenance.

Double acting hydraulics for
quick and easy compressions.

HPE-3 Engine driven
hydraulic pump is
recommended for use with
this compression head.

FEATURES

The EP-100W is a 100ton
compression head for full
tension , transmission line
connectors and requires
and external double
acting 700bar pumping
source.

Double acting means
hydraulically advancing
the ram to build the
tonnage, then hydraulic
pressure is reversed to
retract the ram. This will
expedite the compression
cycle time

Please specify the dia. of
the manufacturers
connectors or Alcan die
no. ie A-9, A-10 etc, with
order.
